Working with the LLM API

Hands-on Labs

Day 1 - Session 2

KavinSchool

Lab Time!

Lab 1.1: "Hello LLM"

KavinSchool

Lab 1.1: "Hello LLM"

Goal: Make 5 different API calls and observe how the model responds.

Time: 20 minutes

File: `day1/labs/lab1_1_hello_llm.py`

Lab 1.1: Tasks

1. Verify your environment with `show_config()`
2. Send 5 different prompts (one per NLP task):
    - Summarize a paragraph
    - Classify a movie review as positive/negative
    - Translate a sentence to Spanish
    - Generate a Python function
    - Explain a concept to a 10-year-old
3. Log each prompt, response, and token count
4. Try the same prompts with `tier="mini"` and compare quality

Lab 1.2: CLI Q&A Script

Goal: Build an interactive command-line chatbot.

Time: 25 minutes

File: `day1/labs/lab1_2_cli_qa.py`

Lab 1.2: Requirements

Requirements:

1. Accept user input from the terminal in a loop
2. Maintain conversation history (multi-turn)
3. Include a system message that sets the persona
4. Display token usage after each response
5. Type `quit` or `exit` to end

Lab 1.2: Stretch Goals

Stretch goals:

- Add a `/clear` command to reset conversation
- Add a `/tokens` command to show total tokens used
- Add a `/model` command to switch between default/mini
